## **DETAILED ACTION**

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Information Disclosure Statement***

The information disclosure statement (IDS) submitted on February 20, 2008 has been considered by the examiner.

### ***Drawings***

The subject matter of this application admits of illustration by a drawing to facilitate understanding of the invention. Applicant is required to furnish a drawing under 37 CFR 1.81(c). No new matter may be introduced in the required drawing. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 11-15 are rejected under 35 U.S.C. 102(e) as being anticipated by either Shadduck (US 7,264,351 B2) or Shadduck (US 7,278,739 B2). Shadduck ('351) and Shadduck ('739) both teach a multi-focal contact lens that is made from a responsive polymer gel (see col. 5, line 56-col. 6, line 67 in ('351); see col. 3, line 66-col. 5, line 3 and col. 5, line 31-35 in ('739)). Since light can be a stimulus, (Fig. 11c in ('351) and Fig. 4 in ('739)), it inherently includes a magnetic and an electric field.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Shadduck (US 7,264,351 B2) or Shadduck (US 7,278,739 B2), taken separately, in view of Large (US 5,712,721). Shadduck (US 7,264,351 B2) or Shadduck (US 7,278,739 B2) are applied for reasons set forth above against claims 11 and 13, but do not teach where a stimulus can be produced by a means such as a micro chip embedded in the contact lens. Large teaches a multi focal contact lens having a stimulus producing means (15) that includes a micro chip embedded in the contact lens.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the multi-focal contact lens of either Shaddock ('351) or Shaddock ('739) with a stimulus producing means such as a micro chip embedded in the contact lens, since as shown by Large, a multi-focal contact lens can include a stimulus producing means such as a micro chip.

#### ***Allowable Subject Matter***

Claims 18-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The prior art does not teach or suggest the recited multi-focal contact lens structure where the chip monitors the eye movement such that a change in eye movement causes the chip to emit the stimulus.

#### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kaufman et al (US 7,423,801) and Mandell (US 5,108,169) are both cited to show switchable type contact lenses.
